NIGERIA'S BOLD PITCH FOR CLIMATE FINANCE

Impact Report of the Inaugural Nigeria Climate Investment Summit (NCIS)

A Flagship Event of London Climate Action Week (LCAW)

Mansion House, City of London, United Kingdom

June 23rd 2026

ORGANISED BY

SOStainability | GLOBE The Global Legislators Organisation

IMPACT REPORT

www.globelegislators.org/nigeria-climate-investment-summit/

Executive Summary

For the first time in eight consecutive years of London Climate Action Week (LCAW), Nigeria turned up. And it did so with a bold and timely statement: a clarion call to the global climate community that the country is ready and open to green investments. **GLOBE Legislators** and **SOStainability** conceived and convened the inaugural Nigeria Climate Investment Summit (NCIS) as a flagship of LCAW, securing the spotlight for the world's largest population of black people and one of Africa's biggest economies.

NCIS provided a global platform for the country's climate credentials to be carefully curated and discussed at the prestigious Mansion House, City of London, where a select audience of high-profile partners, international finance institutions, investors, legislators, regulators, and a wide range of participants engaged a blend of high-level plenary and panel sessions on 'Power, Energy, and Renewables: Opportunities for Investors'; 'Climate Finance & Opportunities in Nigeria's Carbon Markets'; and a concluding spotlight on 'Nigeria's Subnationals as Untapped Goldmine for Green Investments' featuring.

NCIS piggybacked on London's status as the transition finance capital of the world and on the recognition that Nigeria is one of the United Kingdom's biggest commercial partners, with a trade volume of about GBP8.1 billion annually[1]. The Summit affirmed the country's status as one of the world's most attractive markets in energy access, renewable energy and carbon market investments. This is based on appropriate and relevant policies and legislative frameworks; a large population of 230 million people; and a huge endowment in natural resources, including battery minerals central to the global transition economy.

All of these make Nigeria an investor's haven and viable destination for climate finance flows. With the theme, *Catalyzing Nigeria's Climate Policy Progress into Financial Flows for Green Projects*, the Summit attracted global institutional partners, including the Commonwealth Secretariat, the United Nations Sustainable Energy for All (SEForAll), and the Climate Investment Fund (CIF); as well as national, regional, and municipal partners like the Worshipful Company of Fuellers, London's Livery Company, Lagos and Enugu States, Nigeria, and the North East Development Commission (NEDC), among others.

In a similar vein, NCIS attracted high-level speakers and moderators. The lineup included Deputy Speaker of Nigeria's House of Representatives, **Rt. Hon. Benjamin Kalu CFR**; H.E **Babajide Sanwo-Olu,** Lagos State Governor; H.E **Amb. Amin Dalhatu**, Nigeria's High Commissioner to the United Kingdom; H.E **Dr. Peter Mbah,** Enugu State Governor, represented by **Prof. Chidiebere Onyia**, Secretary to the State Government; **Mr Ashutosh Shastri,** Master, The

[1] https://africa.businessinsider.com/local/markets/uknigeria-trade-hits-record-pound81bn-as-nigerian-banks-fintechs-break-into-uk-market/yw1vk5q

Worshipful Company of Fuellers, City of London; and **Rt. Hon. Sam Onuigbo,** President of GLOBE Legislators and Sponsor of Nigeria's Climate Change Act 2021.

Others were **Ms Damilola Ogunbiyi**, Special Representative of the UN Secretary-General, CEO, Sustainable Energy for All; Co-Chair, UN-Energy; **Dr Tariye Gbadegesin,** CEO, Climate Investment Funds; **H.E. Catriona Laing CB,** Former UK High Commissioner to Nigeria, and Special Representative of the UN Secretary General to Somalia; **Mr Pablo Vieira,** Global Director, NDC Partnership Support Unit; **Mr Suresh Yadav,** Director for Climate Change, Ocean and Energy Directorate, Commonwealth Secretariat; **Mr Trevor Hutchings,** Chief Executive Officer, Association for Renewable Energy and Clean Technology (REA), United Kingdom; **Ms Heather Buchanan,** CEO & Co-founder, UK's Bankers for NetZero; **Dr Tauni Lanier**, Sustainable Finance Architect & Climate Capital Thought Leader; **Dr Eugene ltua,** Chief Executive, Natural Eco Capital; **Ms Eniola Akinsete**, Chief Sustainability Officer, Bank of Industry, Nigeria; **Ms Sagarika Chatterjee**, Director, Finance, Technology, and Capacity-building, Climate High-Level Champions; **Mr. Tayo Ajayi**, Vice President and Lead, Climate and Sustainability Investments, Nigeria Sovereign Investments Authority (NSIA); **Ms. Helen Finney,** Head of Carbon Market Programmes and Policy, UK Department for Energy Security and Net Zero; **Professor Chukwumerije Okereke,** President, Society for Planet and Prosperity; **Mr. Mohammad Goni Alkali**, Managing Director and CEO, North East Development Commission (NEDC), represented by Mr. Frank Owhor, Board Member; **Dr. Wale Aboyade**, Vice President, Public Policy and Government Relations, Sun King; **Prof. Emmanuel Ramde,** Executive Director, West African Science Service Centre on Climate Change and Adapted Land Use (WASCAL), Accra, Ghana; and **Ms Wangari Muchiri,** Founder/CEO RE. Think Energy.

The Nigeria Climate Investment Summit (NCIS) produced very significant outcomes as highlighted by these three key takeaways:

i. Launch of GreenFinTel

To take forward some of the commitments made and partnerships initiated during the Summit, GLOBE and SOStainability will be setting up the Green Finance Intelligence (**Green FinTel)** initiative to help track climate finance flows; build capacity of pertinent stakeholders to participate effectively in the climate economy ecosystem, support the creation of enabling environment for climate investments; and engender accountability through institutional and community oversight of climate finance flows into Nigeria, Africa, and other emerging markets.

ii. LAGCAW: From London to Lagos

As announced by the Governor, H.E, Babajide Sanwo-Olu, the Lagos State Government will partner with London Climate Action Week, GLOBE Legislators, and SOStainability to host the first-ever city-themed Climate Action Week in Africa -

Lagos Climate Action Week (LAGCAW) later this year. This brings Lagos into the global community of Climate Action Week events held in London, New York, Sydney, Shanghai, Baku, and Rio.

iii. NCIS 2027

The successful delivery of NCIS 2026 as a flagship event of London Climate Action Week (LCAW) effectively signals plans for the sequel in 2027. GLOBE Legislators and SOStainability have commenced preparations and would welcome expressions of interest as partners, sponsors, and collaborators at different levels.

Background and Context

Nigeria's economic transformation and climate transition agenda are increasingly intersecting. The enactment of the Climate Change Act, the establishment of the National Council on Climate Change (NCCC) and National Climate Action Plan, the Nationally Determined Contributions (NDCs), the Electricity Act 2023 which opened up opportunities for mini and off-grid investments in electricity, the country's Energy Transition Plan, and the emergence of a national carbon market framework collectively signal a shift toward a more structured climate governance architecture and a clearer pathway for climate-aligned investment and finance inflows.

At the same time, the global financial system is undergoing its own transition. Capital markets, institutional investors, development finance institutions, and financial institutions, including deposit money banks, are steadily repositioning portfolios toward sustainable infrastructure, energy transition assets, and climate-resilient economic systems. For emerging economies such as Nigeria, the critical question is no longer whether climate action will require investment, but how effectively policy frameworks, financial institutions, and market actors can translate climate ambition into bankable opportunities capable of attracting international capital and fostering a whole-of-society energy transition.

During President Bola Ahmed Tinubu's official state visit to the United Kingdom in March 2026, he underscored the importance of strengthening economic and investment cooperation between Nigeria and the United Kingdom. London, as the centre of global finance for the energy transition and sustainable finance, provides a global gateway for institutional capital to drive the climate transition in countries such as Nigeria.

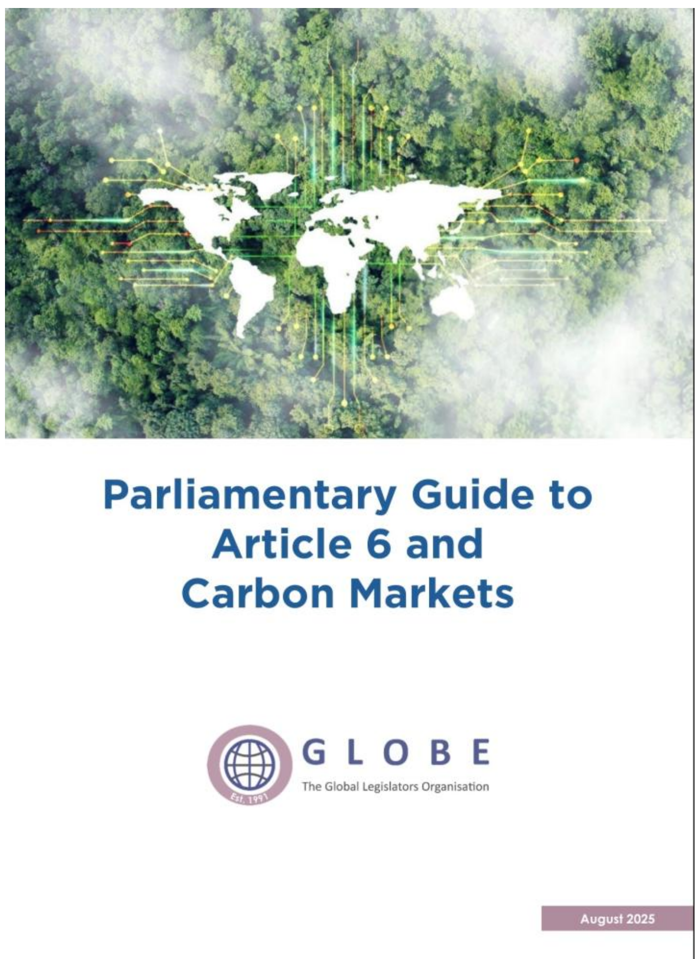
As the UK's largest export market in Africa, Nigeria is well positioned to leverage this relationship to deepen trade and investment ties on sustainable finance and technology to drive the green transition.

Within this environment, London Climate Action Week (LCAW) emerged as the most consequential global convening shaping climate diplomacy and climate finance engagement ahead of the annual Conference of the Parties (COP) meetings, with over 1,300 events recorded during this year's LCAW. Working in partnership with the Mayor of London, the United Nations Framework Convention on Climate Change (UNFCCC), and the COP31 Presidency, LCAW convenes governments, legislators, asset managers, development finance institutions, corporations, and philanthropic capital across Westminster and the City of London for a week of intensive dialogue and partnership building.

The inaugural Nigeria Climate Investment Summit (NCIS) London 2026 was therefore designed to position Nigeria within this global policy and finance ecosystem, creating a focused platform through which investors, lawmakers, policymakers, international development agencies, financial institutions, and relevant parties engaged on the practical pathways for mobilising capital into Nigeria's climate transition. More so, with the attention NCIS garnered, the Summit was elevated as one of the flagship events of London Climate Action Week 2026.

Lawmakers as Key Partners

The strategic partnership with **GLOBE Legislators** was also of immense relevance as GLOBE brought its international influence to bear in projecting the Summit globally. Furthermore, GLOBE ensured that lawmakers were closely involved from the beginning. This is in recognition of the critical role of lawmakers in enacting new and improving existing legislative frameworks in order to ensure proper oversight for implementation and accountability. GLOBE's expertise in this area, building on its pioneering **Parliamentary Guide to Carbon Markets and Article 6** (2025), was deployed to increase awareness and response by legislatures.



As the UNFCCC Focal Point for the Parliamentary Group, GLOBE plays a key role in thought leadership, constituency building, and coordination of global lawmakers.

With COP30 marking the end of the negotiating phase and COP31 the beginning of a new implementation era, GLOBE is leading on bringing legislators centre-stage in practical ways to support the implementation of NDCs and related development strategies.

To this end, the National Assembly of Nigeria was fully represented with the Deputy Speaker, Rt. Hon. Benjamin Kalu CFR leading the delegation from the National Assembly. The leadership of the Benue and Rivers States Houses of Assembly also showed interest and were involved even from the planning stage.

SOStainability, on the other hand, brought the value of its bridge-building mandate of connecting Global North and South institutions for embedding intrinsic positive value for Nature, Humanity, and Society to deliver NCIS. Riding on its ongoing work on Sustainability Policy and Practice Spotlight (SPPS), its government relations expertise and extensive public engagement network, SOStainability mobilised significant interest and buy-in from relevant entities in NCIS, thereby ensuring that the inaugural event was a huge success.

Institutional Partnerships

The NCIS was curated with key institutional partnerships that supported its planning and implementation. Partners made commitments to help drive engagements arising from NCIS 2026.

These support and partnership came from leading international and national institutions including: the Commonwealth Secretariat; United Nations Sustainable Energy for All (SE4ALL), the City of London Worshipful Company of Fuellers; Lagos State Government; Enugu State Government; Society for Planet and Prosperity, Association for Renewable Energy and Clean Technology (REA), United Kingdom; UK's Bankers for NetZero; NDC Partnership; Climate Investment Funds; Bank of Industry, Nigeria; Nigeria Sovereign Investments Authority (NSIA); Foreign and Commonwealth Development Organisation; Federal Ministry of Environment, Nigeria; North East Development Commission, Nigeria; West African Science Service Centre on Climate Change and Adapted Land Use; UNFCCC’s Climate High-Level Champions; RE. Think Energy; Sun King; and Africa Green Economy and Sustainability Institute (AGESI).

These partners, in addition to helping strengthen the summit delivery, participated in various sessions where they made impactful contributions.

Objectives of NCIS

The inaugural Nigeria Climate Investment Summit (NCIS) was designed to achieve the following strategic objectives:

i. Present Nigeria's evolving climate policy and regulatory architecture within an international policy and investment environment

ii. Strengthen dialogue between pertinent actors from Nigeria, including policymakers, regulators, and business leaders, and global financial institutions and the climate diplomatic community on financing the country's climate transition

iii. Foster investment engagements and partnerships on climate finance for bankable projects, including at the subnational levels of Nigeria

iv. Provide international visibility for relevant state actors, financial institutions, and corporates in Nigeria, demonstrating leadership in sustainability and ESG governance

v. Provide a global launchpad for the upcoming Lagos Climate Action Week

The NCIS Methodology

The Nigeria Climate Investment Summit was structured in a three-part format, viz:

Pre-Summit Engagement: The pre-summit engagement involved a series of bilateral meetings with key stakeholders on the policy landscape, investment opportunities, and plans for the future.

It also included a coordinated media campaign through local and international media outlets, as well as social media platforms.

Summit: The summit delivery included an introductory session that aptly set the scene for the day. This was followed by two high-level keynotes that led into two panel sessions focusing on *investment opportunities in Nigeria's power, energy, and renewables*, and the other on *climate finance opportunities in Nigeria's carbon markets*. The last technical session was a spotlight on *Nigeria's subnationals as an untapped goldmine for green Investments.*

The summit drew to a close with two big announcements: the launch of the **Green FinTel** Initiative– an NCIS sustainability and climate finance framework; and the announcement to host the Lagos Climate Action Week (LAGCAW).

Post-Summit: Post-summit plans include a series of media campaigns, stakeholder engagements to boost investment inflows into relevant sectors of the Nigerian economy, and plans to convene Lagos Climate Action Week.

Overall, the NCIS explored approaches that projected Nigeria's policy landscape to highlight the country’s investment potential and specific opportunities available in the green economy, especially in energy, the carbon market, and subnational levels. NCIS created a viable platform for investors to explore the numerous opportunities in the emerging green economy.

Summit Summary

The summit started with welcome addresses by the CEOs of GLOBE Legislators and SOStainability, Malini Mehra and Oke Epia, respectively. This was followed by words of welcome by the London host of the summit, Mr Ashutosh Shastri, Master, The Worshipful Company of Fuellers, City of London.

Then the President of GLOBE Legislators, Rt. Hon. Sam Onuigbo set the scene for the evening by outlining the current policy landscape in Nigeria. He highlighted key legal and policy instruments, including the Climate Change Act 2021, the Energy Transition Plan, the Electricity Act 2023, and the Nigeria Carbon Market Framework (NCMF).

Rt. Hon Sam Onuigbo, President, GLOBE Legislators

Following the opening session was a high-level keynote session which featured presentations by the Deputy Speaker of the Nigerian House of Representatives, Rt. Hon. Benjamin Kalu; Ms Damilola Ogunbiyi, Special Representative of the UN Secretary-General, CEO, Sustainable Energy for All, and Co-Chair, UN-Energy; and Dr Tariye Gbadegesin, CEO, Climate Investment Funds.

Deputy Speaker Benjamin Kalu says Nigeria's Legislature is committed to providing enabling laws

While the Deputy Speaker stressed the huge investment opportunities in Nigeria's green economy, Ms Ogunbiyi and Dr Gbadegesin provided global perspectives on climate investment. Both distinguished speakers outlined the focus of their respective organisations, highlighting priority projects being funded and how the opportunities can be harnessed to address the critical challenges Nigeria faces, especially in the area of energy access and efficiency.

Ms Damilola Ogunbiyi delivering her keynote address

Ms Ogunbiyi mentioned that a fund to finance Nigerian innovators has been set up. She, however, stressed the need for women to be integrated into the renewable energy sector and given a sense of ownership.

"I commend GLOBE Legislators for its enduring leadership in advancing legislative action across the world, and SOStainability for its vision, discipline, and commitment to bridging the gap between climate policy and green capital. I also acknowledge the City of London and all our partners who recognise that the global transition will not succeed if capital does not reach the Global South at the scale, speed and cost required."

- **Rt. Hon. Benjamin Kalu CFR PhD, Deputy Speaker, House of Representatives, Nigeria**

Dr Tariye Gbadegesin during her keynote address

On her part, Dr Gbadedesin stressed that for Nigeria, climate action is not just about the climate but about energy access and economic growth. Noting that while more than USD12bn is being invested in the energy transition, countries that make the greatest progress are those that build strong partnerships and institutions. She acknowledged that Nigeria is recognised as one of Africa’s leading minigrid and off-grid markets with strong policies, but that the next step is unlocking private capital at scale. She concluded that the partnership between international capital and domestic capital will usher the country into the next frontier of energy system growth.

Panel Sessions

Panel 1: **Power, Energy, and Renewables: Opportunities for Investors**

Context: Despite Nigeria's rich endowment in oil and gas, the country's energy deficit remains staggering. In this context, the energy transition holds both promise and challenges. However, significant progress has been made in climate policy and resource governance reforms. Highlights include the Climate Change Act, with clear net-zero commitments; the Petroleum Industry Act, with provisions to support carbon emissions and gas flare reduction and environmental remediation; the Presidential Initiative on Compressed Natural Gas and Electric Vehicles; the adoption of the Energy Transition Plan; the National Carbon Market Framework (NCMF); and the Electricity Act of 2023. These demonstrate how far Nigeria has progressed in the policy arena. The reality, however, is that for a country of 230 million people spread across 774 Local Government Areas, the country's electricity generation and distribution capacity, which fluctuates around 4,000 MW, is grossly inadequate to power homes, hospitals, schools, and businesses. Significantly, this is where the opportunity kicks in. Nigeria's transition landscape, with rich endowments in gas, solar, wind, hydro, hydrogen, battery minerals, etc., and a substantially youthful and industrious population, makes the country an attractive destination for climate finance. This is in addition to the unbundling of the electricity sector, and opportunities in mini and off-grid abound.

This session looked at the current scenario, examined opportunities, reflected on examples from other jurisdictions, and how investments can be catalysed through the country's Nationally Determined Contributions (NDCs).

The panel was moderated by H.E. Catriona Laing CB, Former UK High Commissioner to Nigeria, Special Representative of the UN Secretary-General to Somalia, with the following as speakers:

- **Mr Pablo Vieira,** Global Director, NDC Partnership Support Unit
- **Mr Suresh Yadav,** Director for Climate Change, Ocean and Energy Directorate, Commonwealth Secretariat
- **Mr Trevor Hutchings,** Chief Executive Officer, Association for Renewable Energy and Clean Technology (REA), United Kingdom
- **Ms Heather Buchanan,** CEO & Co-founder, UK's Bankers for NetZero
- **Dr. Wale Aboyade,** Vice President, Public Policy and Government Relations, Sun King

Panelists highlighted some key points including:

- Nigeria's ambitious NDCs can now be a means of attracting investment for renewables
- Over 50% of the electricity in the UK is being powered by renewables. The major driver for the turnaround was target setting. So the first step for Nigeria must be target setting.
- There is a need to partner with other countries too. This can come in the form of technological support, etc.
- The distribution sector of the energy sector is Nigeria's major problem. The good thing is that there is a technological solution--standalone solar. This opens up several opportunities for investments.

Panel 2: **Climate Finance & Opportunities in Nigeria's Carbon Market**

Context: The Nigerian Carbon Market Activation Policy (NCMAP) projects that the country can rake in up to USD2.5bn in annual carbon market revenue by 2030. With a forest cover of between 9 million and 11.1 million hectares, the country's carbon market is a goldmine that can fund critical green projects. The NCMAP, the National Carbon Market Framework (MCMF), the Carbon Market Oversight Body (CMOB) at the National Council of Climate Change (NCCC), and Nigeria's membership of the African Carbon Markets Initiative (ACMI) speak to conducive and regulatory frameworks that can secure the confidence of investors and strongly attract multilateral finance flows. This session reviewed this policy ecosystem, highlighted what is already in place, identified gaps, and interrogated investment pipelines and opportunities. The session also explored the global funding matrix for the transition and how Nigeria can position for best outcomes. The objective was to offer helpful guidance to attract green investment to the country while providing confidence-boosting tips and measures for funders and investors.

The session was moderated by Dr Tauni Lanier, Sustainable Finance Architect & Climate Capital Thought Leader, with the following as speakers:

- **Dr Eugene ltua,** Chief Executive, Natural Eco Capital
- **Ms Eniola Akinsete,** Chief Sustainability Officer, Bank of Industry, Nigeria
- **Ms Sagarika Chatterjee,** Director, Finance, Technology, and Capacity-building, Climate High-Level Champions
- **Mr. Tayo Ajayi,** Vice President and Lead, Climate and Sustainability Investments, Nigeria Sovereign Investments Authority (NSIA)
- **Ms. Helen Finney,** Head of Carbon Market Programmes and Policy, UK Department for Energy Security and Net Zero

Some of the key points highlighted by the panelists are:

- Nigeria has significant natural advantages—large forestry resources, renewable energy potential, clean cooking opportunities, regenerative agriculture opportunities, and one of the largest energy access gaps in the world. These create a substantial pipeline of carbon-generating activities.
- The question is not whether Nigeria can generate carbon credits. The question is whether the country can create projects and platforms that are sufficiently scalable, transparent, and bankable to attract long-term institutional capital
- Carbon projects must also link up with producing social capital
- It is not just about growing carbon markets, but growing them well
- SMEs and MSEs must be supported with the right policies
- Communities must also be integrated and safeguards for benefit-sharing entrenched
- Carbon markets should not be treated as Business as Usual, but as part of a larger investment portfolio

- There should be a change to more of a platform approach where even the little projects can be integrated and grown to scale.
- Important to entrench the mindset of seeing it as beyond carbon markets but as a serious climate finance architecture
- Carbon markets must be conceived as a system where everyone contributes

Spotlight: **Nigeria's Subnationals as Untapped Goldmine for Green Investments**

Context: With 36 states and 774 local government areas spread across 923,768 sq km, Nigeria is governed as a federation. This allows the subnationals to play critical roles in cascading development impacts to the community level. Therefore, investments in the country are necessarily made at specific subnational locations which have differing needs and opportunities. In addition to the nationwide challenge of electricity access, various states offer varying investment opportunities, including solar-powered irrigation, clean cooking, sustainable housing, and climate-smart agriculture. The spotlight session featured presentations by the Enugu State Governor, represented by the Secretary to the State Government, Professor Chidiebere Onyia, and the Lagos State Governor, HE Governor Babajide Sanwo-Olu. Both States outlined the work they are doing to create a conducive environment for investment in the green economy sector.

"Climate investments in Nigeria should not be viewed as investments in about 230-million-person Nigerian market, instead, they should be viewed as investments positioned to access a significant proportion of the 1.3 billion African population with a potential for a market of approximately 2.5 billion people in 2050."

- ***Rt. Hon. Sir Sam Onuigbo FCIS, FNIM, KJW, President GLOBE Legislators***

Key Outcomes and Impact

The Nigeria Climate Investment Summit (NCIS) has kick-started pertinent conversations highlighting the opportunities that abound in the country. These continue to take place in-country and internationally, including ongoing engagements to support Nigeria's subnationals in attracting climate investments.

The NCIS watershed moment was the announcement of the Lagos Climate Action Week (LAGCAW) by the Governor of Lagos State, Mr. Babajide Sanwo-Olu, at the closing session. LAGCAW is the first city-wide climate action week to be held in Africa, attracting global, regional, and national participation. The event will leverage Lagos' cosmopolitan nature to drive multilevel action on climate and green investments.

Watch the announcement here: https://x.com/GLOBE_intl/status/2076642297857384884

At the closing session, GLOBE Legislators and SOStainability announced the launch of Green FinTel - a framework to track climate finance flows and investments in Africa, provide capacity support to boost national pull of climate and green investments, and engender accountability. Green FinTel will be executed in partnership with select stakeholders.

NCIS in the Media

NCIS 2026 generated considerable media interest and reportage from initial announcements to the post-event activities. See a selection of the publications in the table below:

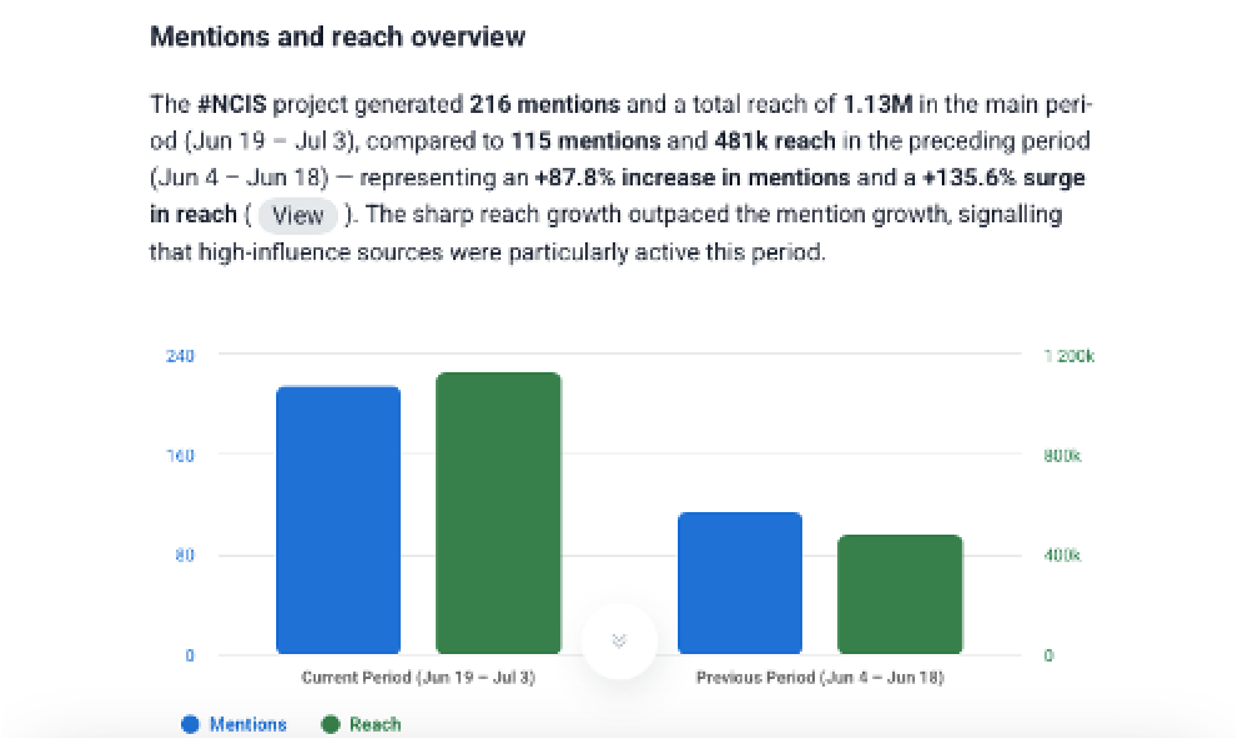
NCIS on Social Media: On social media, the hashtag **#NCIS** attracted considerable engagement, as captured below:



NCIS: The Next Steps

The next three key steps following a highly successful NCIS 2026 are:

- Setting up and expansion of **Green FinTel**: GLOBE and SOStainability are working on securing the partners and kickstarting the next phase.
- Lagos Climate Action Week: As announced by the Lagos State Governor during NCIS2026, details of the inaugural Lagos Climate Action Week (LAGCAW) are being worked out.
- NCIS2027: 22 June 2027 has been earmarked as the tentative date for NCIS 2027.

Conclusion

The inaugural Nigeria Climate Investment Summit (NCIS) may have come and gone. As a flagship event of London Climate Action Week (LCAW), the summit produced several trailblazing milestones that will shape global climate diplomacy in the coming weeks, months, and years. NCIS 2026 forged new partnerships, strengthened existing alliances, and shaped conversations that renew the hope that Nigeria, and indeed, Africa, is on a sure footing on climate action.

GLOBE Legislators and **SOStainability** will continue to engage with partners and other stakeholders to implement the key outcomes of NCIS 2026. Please look out for the next steps. See you at NCIS 2027!
